## TTM-000W SERIES USER'S MANUAL DIN.DIGITAL TEMPERATURE CONTROLLER

Thank you for purchasing model TTM-000W SERIES Digital Temperature Controller.  
Please go through this Instruction Manual carefully and use the unit in proper manner.  
If the unit is used in a manner not specified by the manufacturer, the protection provided may be impaired.

### NOTICE/WARNING BEFORE OPERATION USE

- The meaning of the symbols indicated on the label found at the side of the unit is as follows.
  - △**: Cautions, Danger. Refer to a manual
  - : Alternating current
  - ▲**: Cautions, Danger of Electric Shock
- When having the purchased controller at hand, please be sure that its unit is a correct model (See the following "Model Configuration").
- The following symbol marks **△** provide to prevent incident or damage. Kindly refer to the details of the WARNING/CAUTION when using for the first time.
- Another copy of the user's manual "Advanced Version" is provided at customer's request.

**WARNING**  
Due to mishandling, serious dangers may occur to the operator such as death, electrocution and a skin burn.

**CAUTION**  
Owing to mishandling, it may cause some damage to the unit or the operator getting slight injury.

- For prevention of its malfunction, do not push the front key with sharp points.
- Spare terminal must not be used for other purposes.

- Make sure the correct wiring connection before turning on electricity. Miswiring may cause malfunction of the unit and fire.
- Never modify the unit to prevent damage or incident such as malfunction and fire etc.

- Please put this user's manual aside for your reference, when operating the unit.
- Copy or reprint of this manual, wholly or partially, is not allowed.
- The contents of this manual may change without notice in future.

### INSTALLATION CONDITIONS

- Indoor use · Altitude up to 2000m · Pollution Degree 2
- Mains supply voltage fluctuations can't exceed  $-15\% / +10\%$  percent of nominal voltage. However, 24V does not exceed  $+10\%$  percent.
- TRANSIENT OVERVOLTAGES up to the levels of OVERVOLTAGE CATEGORY II.
- TEMPORARY OVERVOLTAGES occurring on the MAINS supply Short-term:1440V (may last up to 5S) Long-term:490V (may last longer than 5S)

### ACCESSORY & CONFIGURATION

- Please be sure that the unit enclosed in packing carton is a right model before using.
- Kindly check the following accessory being contained in that carton box.
  - Installation Attachment (For installation, please see "INSTALLATION AND WIRING" on the back.)
  - This user's manual : 1 copy

#### 3) Model Configuration

Model	Input	Output 1	Option
<b>TTM - □ □ W - □ - A □ □</b>			
Front Dimensions			
004 48×48 mm			
005 96×48 mm			
006 48×96 mm			
007 72×72 mm			
009 96×96 mm			
<b>CODE Option</b>			
B Output 2 Relay contact		B or P selectable	
P Output 2 SSR drive voltage			
R EV 2 Relay contact Not optional for TTM-004W. When DI is selected for TTM-005W, 006W, 007W or 009W, this option is not available.			
D CT input When DI is selected for TTM-004W, this option is not usable. When I output (4~20mA) is selected, this option is not provided. *1			
E DI(Digital input When CT is selected for TTM-004W, this option cannot be obtained. When EV 2 is selected for TTM-005W, 006W, 007W or 009W, this option cannot be chosen.			
X Communication RS-485 TOHO TTM-100 type protocol-MODBUS			
CODE Input Type Thermocouple (K, J, R, T, N, S, B) R.T.D. (Pt100, JPt100) 2 0~5V, 1~5V, 4~20mA			
CODE Output 1 Relay contact			
P SSR drive voltage			
I Current 4~20 mA DC			
*2 Power supply Voltage 24VDC/AC			

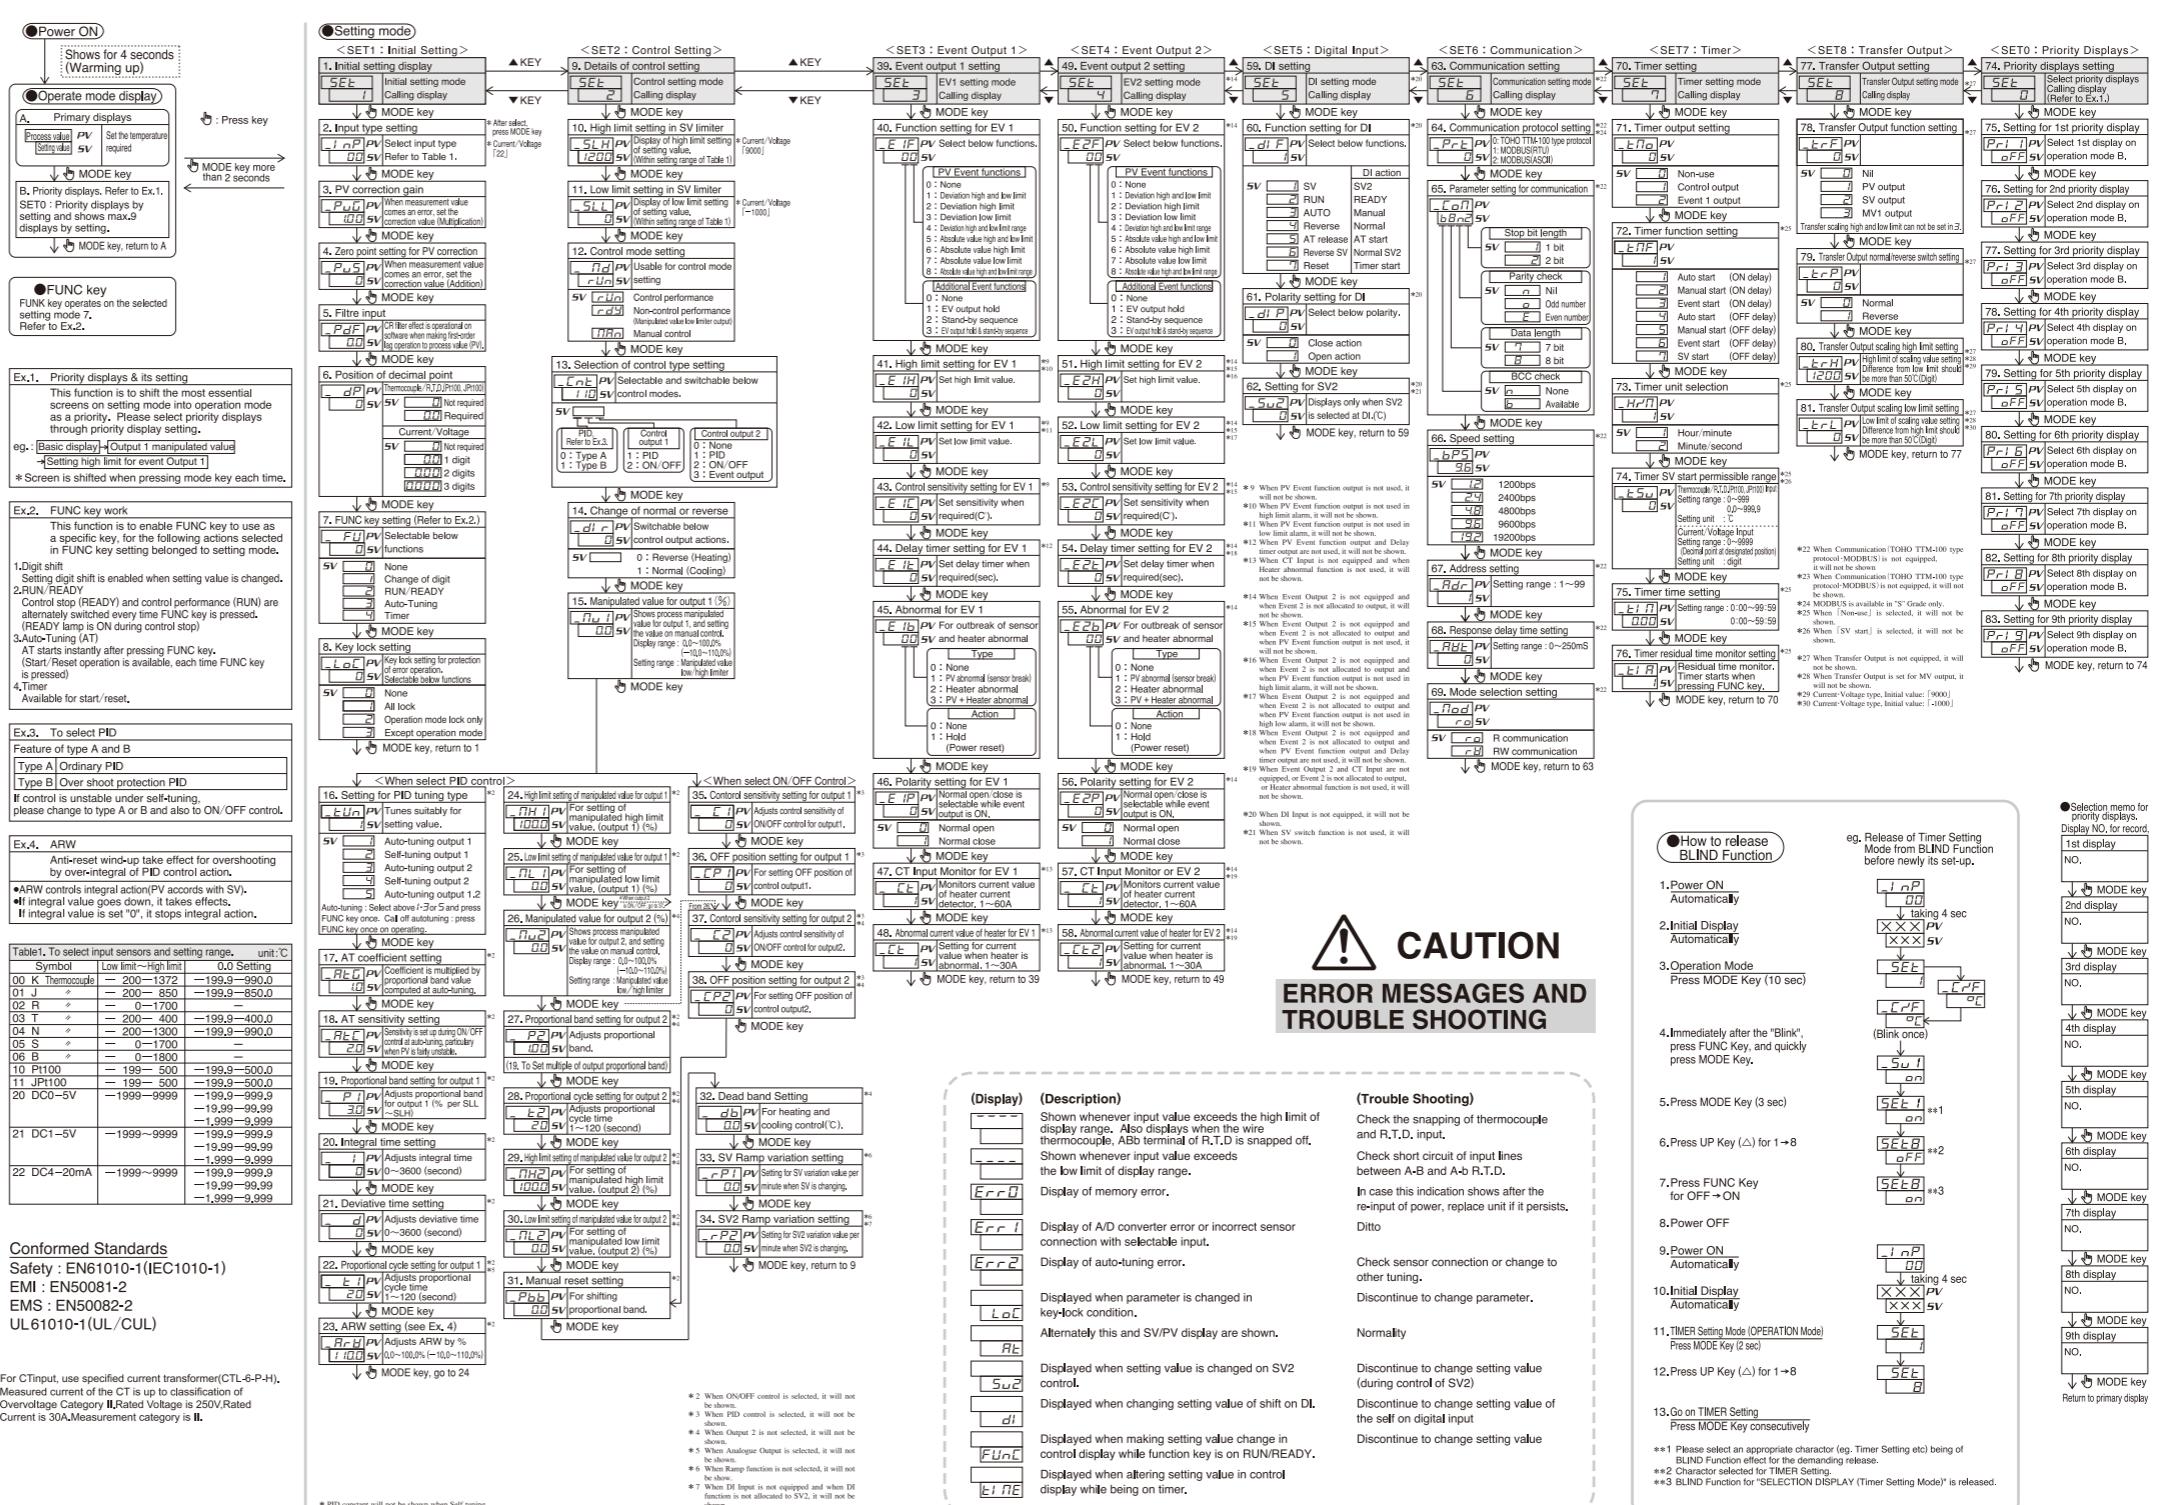

- \*1 For CTinput, use specified current transformer(CTL-6-P-H). Measured current of the CT is up to classification of Overvoltage Category II. Rated Voltage is 250V. Rated Current is 30A. Measurement category is II.
- \*2 Without output 2, EV2 is not available. Output 2 is equally used as EV2, but both not activated simultaneously.
- \*3 Transfer Output(H, K, J, F, G, I), not available in TTM-004W.
- \*4 This product is intended for use with industrial machineries, machine tools and measurement instruments. (It is not to be used with medical equipment which involves human lives).

### SPECIFICATIONS

Power Supply Voltage	100 to 240V AC , 50/60Hz or 24VDC/AC 50/60Hz
Power Consumption	Below 10 VA or 6VA/4W(24V)
Memory Element	EEPROM
Input of Sensor	Thermocouple, R.T.D., 0~5V, 1~5V, 4~20mA (Changeable by front key)
Control Output	Relay contact, SSR drive voltage, Current
Control Method	Two kinds of PID, ON/OFF
Operation Environment	0 to 50°C, 20 to 90%RH (Avoid making dew)
Storage Environment	-25 to 70°C, 5 to 95%RH (Avoid making dew)

### OPERATION FLOW AND SETTING MENU

There are menus not displayed by the selected options and models.

### CAUTION BEFORE CONTROL

- Setting program is stored after power OFF, as non-volatile memory is equipped with TTM-000W SERIES controllers for setting storage.
- Either thermocouple or R.T.D. (Pt 100 / JPt 100) is selectable input type, but Current/Voltage input needs to be selected individually. For suitable application, please select most appropriate input type and adjust input setup.
- PID or ON/OFF control is selective for the optimal performance and each detail of features is specified in the table on the right side.

Merit	PID Control	ON/OFF Control
	Better control result is achieved as opposed to that of ON/OFF control.	Life span of relay is generally longer, as it is ON when temperature is below SV and it is OFF when temperature is over SV (For heating control).
Demerit	Life span of relay is shorter, as output exists frequently with relay contact.	Control value is worse in comparison with that of PID control.

\* PID constants are automatically reckoned up to write in, when control begins or SV is altered on self-tuning.

\* See also "PARTS INDICATION" & "INSTALLATION AND WIRING" on the reverse.

● Selection memo for priority displays.  
Display NO. for record.
